HOW TO REPLY TO THIS NOTICE:

I. Review the SMALL ENTITY status shown above.

If the SMALL ENTITY is shown as YES, verify your current SMALL ENTITY status:

A. If the status is the same, pay the TOTAL FEE(S) DUE shown above.

B. If the status above is to be removed, check box 5b on Part B Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and twice the amount of the ISSUE FEE shown above, or

If the SMALL ENTITY is shown as NO:

(application filed on or after May 29, 2000)

The Patent Term Adjustment to date is 343 day(s). If the issue fee is paid on the date that is three months after the mailing date of this notice and the patent issues on the Tuesday before the date that is 28 weeks (six and a half months) after the mailing date of this notice, the Patent Term Adjustment will be 343 day(s).

If a Continued Prosecution Application (CPA) was filed in the above-identified application, the filing date that determines Patent Term Adjustment is the filing date of the most recent CPA.

Applicant will be able to obtain more detailed information by accessing the Patent Application Information Retrieval (PAIR) WEB site (http://pair.uspto.gov).

Any questions regarding the Patent Term Extension or Adjustment determination should be directed to the Office of Patent Legal Administration at (571)-272-7702. METHOD FOR DETERMINING CURRENT OXYGEN LOADING OF A 3-WAY CATALYTIC CONVERTER OF A LAMBDA-CONTROLLED INTERNAL COMBUSTION ENGINE

EXAMINERS AMENDMENT

The numbering of claims is not in accordance with 37 CFR 1.126 which requires the original numbering of the claims to be preserved throughout the prosecution. When claims are canceled, the remaining claims must not be renumbered. When new claims are presented, they must be numbered *consecutively* beginning with the number next following the highest numbered claims previously presented (whether entered or not).

The Applicant failed to present a claim 22. Thus, misnumbered claims 23-26 have been renumbered as claims 22-25.

Application/Control Number: 10/590,788 Page 3

Art Unit: 2855

REASONS FOR ALLOWANCE

Claims 12-15 have been found to be allowable over the prior art because the prior art fails to teach or suggest a method for determining current oxygen loading of a 3-way catalytic converter of a lambda-controlled internal combustion engine, comprising:

calculating a relative value for current oxygen loading of the catalytic converter from the pre-converter lambda value and the determine air mass flow rate through integration over time; initializing the current oxygen loading relative value using the post-converter lambda probe value at time intervals in order to obtain an absolute value for current oxygen loading; calculating a maximum oxygen storage capacity of the catalytic converter; and calculating a current oxygen quotient from a quotient of current oxygen loading and the maximum oxygen storage capacity of the catalytic converter to aid in the regulation of engine emission output.

Claims 16-24 have been found to be allowable over the prior art because the prior art fails to teach or suggest a method for regulating an exhaust treatment of a lambda-controlled internal combustion engine having a lambda controller and a 3-way catalytic converter, comprising:

calculating a relative value for current oxygen loading of the catalytic converter from the

pre-converter lambda value and from the measured air-mass flow rate by integrating over time; initializing the current oxygen loading relative value via the post-converter lambda probe

value at intervals in order to obtain an absolute value for current oxygen loading;

calculating a maximum oxygen storage capacity of the catalytic converter; and calculating a current oxygen quotient from a quotient of current oxygen loading and the maximum oxygen storage capacity of the catalytic converter to assess the regulation of engine emission output as a function of the current oxygen loading level of the catalytic converter.

Claim 25 has been found to be allowable over the prior art because the prior art fails to

teach or suggest a system for regulating the emission output of an internal combustion engine, comprising a lambda controller that regulates the operation of the internal combustion engine by:

calculating a relative value for current oxygen loading of the catalytic converter from the pre-converter lambda value and from the measured air mass flow rate by integrating over time, initializing the current oxygen loading relative value via the post-converter lambda probe value at intervals in order to obtain an absolute value for current oxygen loading,

calculating a maximum oxygen storage capacity of the catalytic converter, and calculating a current oxygen quotient from a quotient of current oxygen loading and the maximum oxygen storage capacity of the catalytic converter to assess the regulation of engine emission output as a function of the current oxygen loading level of the catalytic converter.
